

الاختبار النصفى لمقرر التعلم العميق المتقدم (AI4204)

Midterm Exam – Advance Deep Learning (AI4203)

الفصل الدراسي	تاريخ الاختبار	مدة الاختبار
472	الأربعاء 1447/10/20 الموافق 2026/04/08	ساعة

تعليمات الإختبار:

- عدد أسئلة الاختبار ١٢ سؤالاً.
- درجة الاختبار ٣٠ درجة.
- تأكد من كتابة اسمك ورقمك الجامعي ورقم الشعبة في ورقة الإجابة .
- غير مسموح باستخدام أي مذكرات أو مراجع أثناء الاختبار (Closed book exam).
- في حال احتجت إلى مساعدة أو استفسار، ارفع يدك وانتظر المراقب للرد علي ك.
- احرص على متابعة وقت الاختبار لكي تتمكن من الإجابة على جميع الأسئلة
-

Exam Instructions

- The exam consists of 12 questions.
- The total exam score is 30 marks.
- Make sure to clearly write your name, university ID number, and section number on the answer sheet.
- No notes or reference materials are allowed during the exam (closed-book exam).
- At the end of the exam, submit both the question paper and the answer sheet to the invigilator.
- If you need assistance or have a question, raise your hand and wait for the invigilator to assist you.
- Please manage your time carefully to ensure you are able to answer all required questions.

رقم الشعبة	اسم الطالب	الرقم الجامعي
	ريان عبد الله مبارك بعوفى	444007002

1. What are the three main parts that make up the Transformer architecture?

Transformers consists of Encoder and decoder blocks It use:

1- word embedding, 2- Positional encoding, 3- attention

Encoder-decoder-Attention

عندما مزج
بين إحصائيات
فردية

2. What is the primary function of "Positional Encoding" in Transformers?

It tells the model the exact order and position of the words.

3. In calculating self-attention, three variables taken from database terminology are used. What are they?

Query (Q), Key (K), and Value (V)

4. In the self-attention mechanism, what does the Query (Q) represent?

- A) The stored information retrieved as a result of the attention process
- ☒ B) The current word that is "asking" which other words are most relevant to it
- C) A label used to index and match words in the attention lookup table
- D) The scaling factor applied before the SoftMax to stabilize gradients

5. The SoftMax function in the self-attention equation converts similarity scores into probabilities that sum to 1, producing attention weights for each word.

☒ A) True

B) False

6. What is the key difference between Self-Attention and Masked Self-Attention regarding access to other words?

- A) Self-Attention can only look at previous words, while Masked Self-Attention can look at all words
- ☒ B) Self-Attention allows every word to attend to all other words, while Masked Self-Attention restricts each word to attend only to previous words
- C) Both allow full access to all words, but Masked Self-Attention applies dropout for regularization
- D) Masked Self-Attention attends to future words only, while Self-Attention attends to past words only

7. Why do we transpose the Key matrix (K) when multiplying it with the Query

- A) To normalize the values and prevent large numbers
- ☒ B) To make the matrix dimensions compatible for multiplication
- C) To reduce the size of the matrix for faster computation
- D) To apply positional encoding to the input

8. What is the title of the seminal 2017 paper that first introduced transformer architecture, and what specific task was the model originally designed to perform?

"Attention is all You need"

The model was originally designed for : neural machine translation (NMT)

9. In Encoder-Decoder Attention, where do Q, K, V come from?

Queries (Q) come from decoder

Keys (K) and Values (V) come from encoder.

10. Mention two practical uses for the "Context Aware Embeddings" produced by Encoder-Only Transformers?

1- Text classification

2- Sentiment analysis

11. Explain what Word Embedding and Positional Encoding are, and how they are combined to form the input of a Transformer model. *give the word its meaning.*

ع

Word embedding *convert* the word into numbers *because* transformers is NN and NN can only use numbers as input but the problem is word embedding ignore the order. so because of that we need Positional encoding to track the order because the order is so important — "dog bites man" ~~is different~~ not "man bites dog"

12. Compare Encoder-Only and Decoder-Only Transformers. Explain the type of attention used in each, their primary goals, and why ChatGPT is considered a Generative Model.

Aspect	Encoder-Only	Decoder-Only
Attention	<i>Self-attention</i>	<i>Masked self-attention</i>
Goal	<i>to look at the whole text so allows every word to attend to all other words</i>	<i>to look at only Past words text to generate new words</i>
Example tasks	<i>Sentiment analysis</i>	<i>Neural machine translation (NMT)</i>

Why ChatGPT is generative:

because it's use decoder architecture to Predict the next word by the Previous words word-by-word and then generate new words and also use encoder for text classification for example so GPT combined it together.
~ Good Luck ~

Questions Overview (Marks Distribution)

Q#	Question Type	Marks
Q1	Short Answer	2
Q2	Short Answer	2
Q3	Short Answer	2
Q4	MCQ	2
